

# Set of Stack

→ Here we have Threshold value, when the no. of elements reach its max capacity or Threshold, another stack is made, push pop function should behave same.

→ we can use arraylist of stack, arraylist of object.  
where object is

```
{ stack s0;  
  int no. of elements; or current size.
```

```
}
```

↳ we also need pop at function  
it will pop stack at the  
given index
